EDUCATION

Ardahan University

Computer Programming **GPA: 2.70**

Graduate

Ardahan, Turkey

2024 – 2026

Focus Area: Full-stack web development, hardware architecture

EXPERIENCE

Ardahan University, Information Technology Department

Technical Support Specialist & Web Developer

Ardahan, Turkey

Jun 2023 – Sep 2023, Internship

- Provided comprehensive technical support to 150+ university students and staff; diagnosed and resolved hardware, software, and network-related issues with an average resolution time of 24 hours.
- Performed preventive and corrective maintenance on 30+ desktop and laptop systems, including hardware upgrades, driver installations, and operating system configurations.
- Contributed to maintenance and improvement of the institutional web portal; fixed HTML/CSS issues, optimized page loading times by 35%, and implemented responsive design updates to improve user experience.
- Prepared technical documentation and troubleshooting guides for common IT issues, reducing recurring support requests by 20%.

SKILLS

Soft Skills: Problem solving, collaborative development, technical communication, self-learning

Programming Languages: JavaScript (ES6+), C#, C++, Python

Frontend Development: HTML5, CSS3, JavaScript, React, React Native, Bootstrap, Tailwind CSS

Backend Development: ASP.NET

Databases: MySQL, SQL Server, Access, database design & optimization

Tools & Technologies: Git, GitHub, VS Code, Visual Studio, responsive design

SELECTED PROJECTS

Faculty Guide Web Application (Barcode System) | [GitHub](#)

- Developed a comprehensive web-based directory system using barcode technology to provide fast access to faculty, department, and personnel information across the university.
- Designed role-based access control (RBAC) to provide secure information access with appropriate authorization levels for different user groups.
- Optimized database queries and implemented caching mechanisms, reducing query response time by 40% and improving overall system performance.
- Built a user-friendly interface with ASP.NET and C# backend infrastructure; used SQL Server for data persistence and integrity.

Ardahan University User Density System | *ESP32 Nano, ASP.NET*

- Developed an ESP32 Nano-based sensor system to measure real-time occupancy levels in shared areas such as the cafeteria and dining hall.
- Transferred collected occupancy data to the website through ASP.NET infrastructure, enabling users to remotely monitor area availability.
- Created a practical monitoring solution supporting campus occupancy management through hardware and web software integration.

Ardahan University Computer Club Website | [GitHub](#)

- Designed and developed a modern, fully responsive website presenting club activities, events, and member profiles through an intuitive content management system (CMS).
- Developed a dynamic event registration module enabling members to register for events in real time and receive automatic confirmation emails.
- Built a gallery management system allowing event photos to be easily added and organized with captions and metadata support.
- Deployed the website on a web server, reaching 500+ monthly visitors; maintained 99.5% uptime through proactive monitoring and routine maintenance.
- Used HTML5, CSS3, Bootstrap, and JavaScript on the frontend; ASP.NET and C# for backend functionality.

Smart Automation Control System

- Designed and prototyped an IoT-based home automation system using Arduino microcontrollers to remotely control lighting, temperature, and devices.
- Designed a sensor integration architecture for temperature, humidity, and motion detection with real-time data collection and analysis.
- Developed a JavaScript-based web dashboard for live monitoring and control of automated devices with historical data visualization.

Responsive E-Commerce Landing Page

- Created a modern, mobile-first landing page for an e-commerce platform with a responsive grid layout and interactive elements.
- Implemented lazy loading for images and optimized CSS animations to achieve a 92+ Lighthouse performance score.
- Integrated a contact form with client-side validation and backend email notification using JavaScript and ASP.NET.

Educational Content Management System (CMS)

- Developed a full-featured CMS enabling educators to create, organize, and deliver online educational content with progress tracking.
- Implemented user authentication, role-based permissions, and progress analytics for both instructors and students.
- Developed using C#, ASP.NET, and SQL Server with a focus on scalability and data security.

CERTIFICATES

Web Development Certificate — Udemy	<i>December 2023</i>
C# Programming Language — Microsoft Learn	<i>October 2023</i>
Responsive Web Design — freeCodeCamp	<i>August 2023</i>
JavaScript Algorithms — freeCodeCamp	<i>June 2023</i>
SQL Database Management — Coursera	<i>May 2023</i>
Git & GitHub Training — Udemy	<i>March 2023</i>
